Preface

Welcome to the Solution Package for Node.js documentation.

Read this preface for an overview of the information provided in this guide and the documentation conventions used throughout, additional reading, and contact information. This preface includes the following sections:

- [“About This Guide” on page 1](#)
- [“Additional Resources” on page 1](#)
- [“Contacting SL” on page 2](#)

About This Guide

The *Solution Package for Node.js User's Guide* describes how to install, configure, and use the Monitor.

Document Conventions

This guide uses the following standard set of typographical conventions.

Convention	Meaning
<i>italics</i>	Within text, new terms and emphasized words appear in italic typeface.
boldface	Within text, directory paths, file names, commands and GUI controls appear in bold typeface.
Courier	Code examples appear in Courier font: amnesiac > enable amnesiac # configure terminal
< >	Values that you specify appear in angle brackets: interface <ipaddress>

Additional Resources

This section describes resources that supplement the information in this guide. It includes the following information:

- [“Release Notes” on page 2](#)
- [“Documentation and Support Knowledge Base” on page 2](#)

Release Notes

The Release Notes, which supplement the information in this user guide, are available on the SL Technical Support site at <http://www.sl.com/support/documentation/>.

Documentation and Support Knowledge Base

For a complete list and the most current version of SL documentation, visit the SL Support website located at <http://www.sl.com/support/documentation/>. The SL Knowledge Base is a database of known issues, how-to documents, system requirements, and common error messages. You can browse titles or search for keywords and strings. To access the SL Knowledge Base, log in to the SL Support site located at <http://www.sl.com/support/>.

Contacting SL

This section describes how to contact departments within SL.

Internet

You can learn about SL products at <http://www.sl.com>.

Technical Support

If you have problems installing, using, or replacing SL products, contact SL Support or your channel partner who provides support. To contact SL Support, open a trouble ticket by calling 415 927 8400 in the United States and Canada or +1 415 927 8400 outside the United States.

You can also go to <http://www.sl.com/support/>.

CHAPTER 1 Introduction to the Monitor

This section contains the following:

- “Overview” on page 3
- “System Requirements” on page 4

Overview

The Solution Package for Node.js is an easy to configure and use monitoring system that gives you extensive visibility into the health and performance of your Node.js node instances, node requests, and node processes.

The Monitor enables Node.js users to continually assess and analyze the health and performance of their infrastructure, gain early warning of issues with historical context, and effectively plan for capacity of their messaging system. It does so by aggregating and analyzing key performance metrics across all instances, requests, and processes, and presents the results, in real time, through meaningful dashboards as data is collected.

Users also benefit from predefined dashboards and alerts that pin-point critical areas to monitor in most environments, and allow for customization of thresholds to let users fine-tune when alert events should be activated.

The Monitor also contains alert management features so that the life cycle of an alert event can be managed to proper resolution. All of these features allow you to know exactly what is going on at any given point, analyze the historical trends of the key metrics, and respond to issues before they can degrade service levels in high-volume, high-transaction environments.

Solution Package

The Node.js Monitor can be installed as a Solution Package within the RTView Enterprise Monitor® product. RTView Enterprise Monitor is an end-to-end monitoring platform that allows application support teams to understand how infrastructure, middleware, and application performance data affect the availability and health of the entire application. Used as a solution package within RTView Enterprise Monitor, the Node.js metrics and health state are but one source of information that determines the entire health state of the application.

Get Started

Go to “Quick Start - Solution Package” on page 5 for details on how to get up and running with the Solution Package for Node.js. RTView Enterprise Monitor® 3.3 must be installed on your system.

For more information about RTView Enterprise Monitor®, see the *RTView Enterprise Monitor® User's Guide*, available at <http://www.sl.com/support/documentation/>.

System Requirements

Please refer to the **README_sysreq.txt** from your product installation. A copy of this file is also available on the product download page.

CHAPTER 2 Quick Start - Solution Package

This section describes how to install, configure, and start the Solution Package for Node.js. See **README_sysreq.txt** for the full system requirements for RTView®.

The Solution Package for Node.js requires RTView Enterprise Monitor 3.3.

For Linux, these instructions require a Bourne-compatible shell.

These instructions assume you are familiar with the start/stop scripts for RTView Enterprise Monitor. For details, see the *RTView Enterprise Monitor® User's Guide* available at <http://www.sl.com/support/documentation/>.

As a general rule, SL recommends creating a top-level directory named **RTView** and installing RTView Enterprise Monitor under this directory. The following sections assume that you have created an **RTView** directory and installed RTView Enterprise Monitor under the **RTView** directory, thus resulting in the **RTView/rtvapm** directory structure.

This document also assumes you created a project directory, **rtvapm_projects**, when you installed RTView Enterprise Monitor. All examples (of configurations, property settings, command execution, and so forth) refer to the project directory. The Solution Package for Node.js configuration is located in the **rtvapm_projects/emsample/servers/miscmon**.

This section includes:

- "Install & Setup," next
- "Setup Your Data Connection" on page 7
- "Start the Monitor" on page 8
- "Stop the Monitor" on page 9
- "Troubleshooting" on page 10

Install & Setup

Prerequisite: RTView Enterprise Monitor 3.3 must be installed on your system.

1. Download the **rtvapm_nodemon_<version>.zip** archive to your local Windows/UNIX/Linux server.

2. Extract the files:

Windows:

Type **unzip rtvapm_nodemon _<version>.zip** and save the files to the **C:\RTView** directory.

UNIX/Linux:

Type **unzip -a rtvapm_nodemon _<version>.zip** and save the files to the **/opt/RTView** directory.

3. Verify that the **nodemon** directory was created under **rtvapm** and extracted correctly.
4. Verify you do not have an extra **rtvapm** directory containing **nodemon**. If you do, move these directories under the first **rtvapm** directory and delete the nested **rtvapm**.
5. Set **JAVA_HOME** to the location of your Java installation and include the **bin** directory under **JAVA_HOME** in the path.
Important: This environment variable must be defined in UNIX/Linux systems for Tomcat to start successfully.

Installing the Agent

Nodemon requires adding the **rtview-nodemon** module into your Node.js server application.

1. Copy the **C:/RTView/rtvapm/nodemon/agents/rtview-nodemon-<VERSION>.zip** file into your server application's **node_modules** folder and unzip the files. The **rtview-nodemon** sub-directory is automatically created in your **node_modules** directory (**node_modules/rtview-nodemon**).
2. In a command window, **cd** to the **node_modules/rtview-nodemon** directory and type **npm install** to install the required **rtview-nodemon** modules.
3. In your Node.js server application, you need to add a reference to the **rtview-nodemon** module. Below are two examples of how to add a reference:

Example 1:

```
require('rtview-nodemon').start({ 'app' : app, 'id' : 'your_serverID', 'cluster' : cluster });
```

Example 2:

```
var rtv = require('rtview-nodemon');
rtv.start({ 'app' : app, 'host' : 'id' : 'your_server_display_name', 'cluster' : cluster });
```

Required Argument Fields:

'app' : The reference to your express application object. This is only required for the master node in a clustered node application. For example:

```
var app = express();
```

'id' : The label used by nodemon to identify your server instance.

Optional Argument Fields:

'cluster' : If you are running a clustered Node.js application, this is the reference to the cluster object. Omit this option if non-clustered. For example:

```
var cluster = require('cluster');
```

'host' : The host name or IP address of your RTView EM nodemon installation if other than 'localhost'

'port' : **3275** The port number of your RTView EM nodemon installation. This must match the "**rtvhttpoption port**" entry found in **RTVHTTPOPTIONS.ini**, which is currently 3275.

Defining User-Defined Host Names

The Node.js Monitor uses the application's host name that is pulled from the operating system or container in which it is running to populate the **Host** drop down lists/columns that appear throughout Node.js Monitor. In some cases, there could be more than one application running on the same operating system or within the same container, which means that the same host name might be used for multiple applications. To better determine the identity of the specific applications, you can assign a user-defined host name for the application using one of the following two methods:

- Set a user-defined host name by adding **-rtvhttp_host** in the command line when starting the application. For example: **-rtvhttp_host=<YourHostName>**
- Define the **RTVHTTP_HOST** environment variable specifying the host name. For example: **RTVHTTP_HOST=<YourHostName>**

When both are specified, the command line argument takes precedence over the environment variable. Once set, the user-defined host name will display in the **Host** drop down lists/columns throughout Node.js Monitor, thus allowing you to select the specific application for which you want to view data.

Proceed to "[Setup Your Data Connection](#)," next.

Setup Your Data Connection

The default port used for data collection is defined in the **sample.properties** file. To modify the default, perform the following:

1. Open the **RTView/rtvapm_projects/emsample/servers/miscmon/sample.properties** file and find the following section:

```
#####
# NODEMON sample properties
#####

#####
# RTVHTTP DATA COLLECTOR PROPERTIES

# Configure your data connections here ...
# The examples shown below should be tailored to your environment.

# RTVHTTP OPTIONS SETTINGS
#
# Configure the listening port for the rtvhttp data adapter
#
# If multiple solution packs use the rtvhttp data adapter and are included the
# same data server (e.g. MISCMON)
# then be aware this property may occur multiple times in the same properties
# file,
# with the last occurrence to set the value taking precedence.

collector.sl.rtvhttp.rtvhttp.port=3275
```

2. Edit the following line and specify the Node.js rtvhttp data adapter port to which you want to connect (to enable the Monitor to collect data):

```
collector.sl.rtvview.rtvhttp.port=3275
```

Proceed to [“Start the Monitor,”](#) next

Start the Monitor

Use the configuration defined in the **rtvservers.dat** file, which is located in the **RTView/rtvapm_projects/emsample/servers** directory.

1. Initialize a command line window by executing the **rtvapm_init** script. For example:

Windows

Go to your RTView Enterprise Monitor installation directory and type:

rtvapm_init

UNIX

Go to your Enterprise Monitor installation directory and type:

./rtvapm_init.sh

2. Initialize the user project directory by executing the **rtvapm_user_init** script. For example:

Windows

Change directory (**cd**) to **RTView\rtvapm_projects\emsample** and type:

rtvapm_user_init

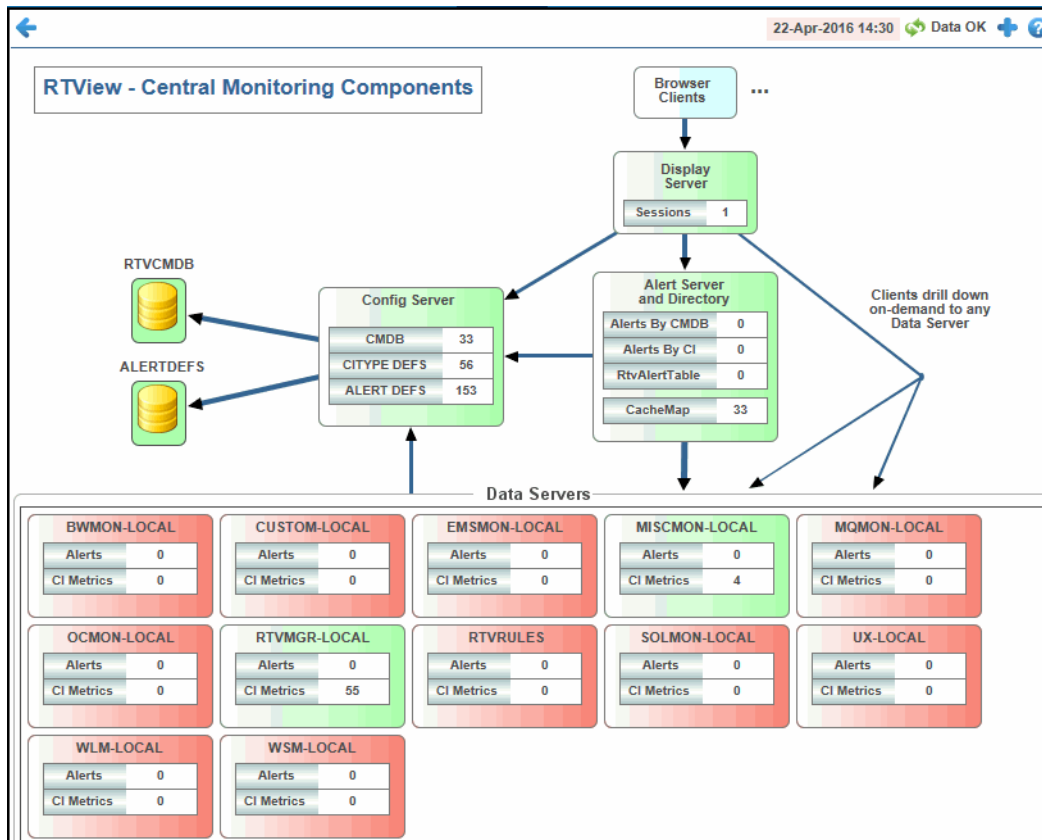

UNIX

Change directory (**cd**) to **RTView/rtvapm_projects/emsample** and type:

./rtvapm_user_init.sh

3. Change directory (**cd**) to **rtvapm_projects/emsample/servers**.
4. Execute **start_rtv.sh central** (**start_rtv central** for Windows) to start the RTView Enterprise Monitor main processes.
5. Execute **start_rtv.sh rtvmgr** (**start_rtv rtvmgr** for Windows) to start the RTView Manager.
6. Execute **start_rtv.sh miscmon -properties:sample** (or **start_rtv miscmon -properties:sample** for Windows) to start all components of the Solution Package for Node.js.
Note: Make sure that you have deployed the **emsample.war** file to your application server prior to attempting the next step. See the “Configure Central Servers” section in the RTView Enterprise Monitor document for more information.
7. Open a browser and go to your RTView Enterprise Monitor deployment.
8. Verify that the Data Server is collecting data by navigating to the **Admin** tab and clicking **Architecture->System Overview** in the navigation tree. The **RTView - Central Monitoring Components** display should open and the Data Server, named **MISCMON-**

LOCAL (by default), should be green and the **CI Metrics** value should be greater than zero (0). For example:

You have completed the Quick Start.

For information about configuring RTView Enterprise Monitor and Solution Packages for your production environment, see the *RTView Enterprise Monitor® User's Guide* available at <http://www.sl.com/support/documentation/>.

Stop the Monitor

To stop the Solution Package for Node.js (in RTView Enterprise Monitor):

1. Change directory (**cd**) to **RTView/rtvapm_projects/emsample/servers**.
2. Execute **stop_rtv.sh miscmon** (or **stop_rtv miscmon** for Windows) to stop all components of the Solution Package for Node.js.

Troubleshooting

This section includes:

- [“Log Files,”](#) next
- [“JAVA_HOME”](#) on page 10
- [“Permissions”](#) on page 10
- [“Network/DNS”](#) on page 10
- [“Verify Data Received from Data Server”](#) on page 10
- [“Verify Port Assignments”](#) on page 11

Log Files

When a Monitor component encounters an error, it outputs an error message to the console and/or to the corresponding log file. If you encounter issues, look for errors in the following log files:

- **dataserver.log**
- **historian.log**

which are located in the **rtvapm_projects/emsample/servers/miscmon/logs** directory.

Logging is enabled by default. If you encounter issues with log files, verify the **logs** directory exists in the **rtvapm_projects/emsample/servers/miscmon** directory.

JAVA_HOME

If the terminal window closes after executing the **start_rtv** command, verify that **JAVA_HOME** is set correctly.

Permissions

If there are permissions-related errors in the response from the **start_rtv** command, check ownership of the directory structure.

Network/DNS

If any log file shows reference to an invalid URL, check your system's hosts file and confirm with your Network Administrator whether your access to the remote system is being blocked.

Verify Data Received from Data Server

If you encounter problems collecting data, restart the Data Server, start the Monitor, and go to the **Admin** tab and select **Architecture> RTView Cache Tables** in the navigation tree. Select **MISCMON-LOCAL** from the **Data Server** drop down list, and search for all caches that start with “Node.” Make sure these caches are populated (the number of **Rows** and **Columns** in the table should be greater than 0). If not, there might be a problem with the connection to the Data Server.

Verify Port Assignments

If the Viewer, display server, or Historian fail to connect to the Data Server or they receive no data, verify the ports are assigned correctly in your properties files and restart the Data Server.

CHAPTER 3 Solution Package Production Configuration

For information about configuring RTView Enterprise Monitor and Solution Packages for your production environment, see the *RTView Enterprise Monitor® User's Guide* available at <http://www.sl.com/support/documentation/>.

CHAPTER 4 Deployment

This section describes how to deploy the Monitor components. This section includes:

- [“Overview” on page 15](#)
- [“Desktop Application Deployment” on page 15](#)
- [“Web Application Deployment” on page 17](#)
- [“RTView Server Components as Windows Services” on page 20](#)
- [“Troubleshooting” on page 21](#)

Overview

The Monitor can be deployed as a stand-alone desktop client or as a web application that runs in a browser. Evaluation environments can use the provided HSQLDB database. Production environments require a supported JDBC- or ODBC-enabled relational database to store historical information. Supported databases are MySQL, SyBase, Oracle, SqlServer and DB2.

The central processes are typically deployed on the same host. However, these processes can optionally be configured on separate hosts. Doing so can increase performance in deployments that need to support many end users or systems with large servers.

- [“Desktop Application Deployment” on page 15](#)
If you choose the desktop option, the Monitor desktop application needs to be installed at each client.
- [“Web Application Deployment” on page 17](#)
If you choose the browser option, clients need only a browser and Adobe Flash installed.

Desktop Application Deployment

This section describes how to deploy the Monitor as a desktop application. You deploy the Monitor using the **start_rtv** script (and stop the Monitor using the **stop_rtv** script). In a desktop deployment the stand-alone desktop client connects directly to an RTView Data Server which gathers performance metrics. For desktop deployments, the following processes are started: the RTView Data Server, Historian, and Viewer desktop application, as well as the database.

NOTE: The RTView Data Server, Historian and Display Server can be run as Windows Services. For details, see [“RTView Server Components as Windows Services” on page 20](#).

To deploy the Monitor as a desktop application:

- [“Windows” on page 16](#)

- ["UNIX/Linux" on page 16](#)

Windows

1. Initialize a command window. Go to your Monitor installation directory and type:
rtvapm_init
2. Change directory (**cd**) to the **RTView\rtvapm_projects\emsample** directory and type:
rtvapm_user_init
3. Change directory (**cd**) to **RTView\rtvapm_projects\emsample\servers** and type:
start_rtv central
start_rtv rtvmgr
start_rtv nodemon
4. Start the Viewer by typing:
start_rtv viewer
5. Login. The default user name and password are:
User Name: **demo**
Password: **demo**
The RTView Enterprise Monitor display opens.

UNIX/Linux

1. Initialize a terminal window. The script used to initialize a terminal window depends on whether you are in csh or rsh (e.g. Linux, Mac OS X). With a Bourne shell, open a terminal window, go to your Monitor installation directory and type:
..../rtvapm_init.sh
2. Change directory (**cd**) to the **RTView/rtvapm_projects/emsample** directory and type:
..../rtvapm_user_init.sh
3. Change directory (**cd**) to **RTView/rtvapm_projects/emsample/servers** and type:
start_rtv.sh central
start_rtv.sh rtvmgr
start_rtv.sh nodemon
4. Start the Viewer by typing:
start_rtv.sh viewer
5. Login. The default user name and password are:
User Name: **demo**
Password: **demo**

The RTView Enterprise Monitor display opens.

Web Application Deployment

This section describes how to deploy the Monitor as a web application. You deploy the Monitor using the **start_rtv** script (and stop the Monitor using the **stop_rtv** script). For web application deployments the following processes are started: the RTView Data Server, Historian and Display Server, as well as the database and an application server.

NOTE: The RTView Data Server, Historian and Display Server can be run as Windows Services. For details, see [“RTView Server Components as Windows Services” on page 20](#).

To deploy the Monitor as a web application:

- [“Windows” on page 17](#)
- [“UNIX/Linux” on page 18](#)

To view a list of iPad Safari limitations:

- [“iPad Safari Limitations” on page 18](#)

Windows

1. Copy the **RTView\rtvapm\projects\webapps\emsample.war** file and deploy it to your Application Server.
2. Start your Application Server.
3. Initialize a command window. Go to your Monitor installation directory and type:
rtvapm_init
4. Change directory (**cd**) to **RTView\rtvapm_projects\emsample** and type:
rtvapm_user_init
5. Change directory (**cd**) to **RTView\rtvapm_projects\emsample\servers** and type:
start_rtv central
start_rtv rtvmgr
start_rtv nodemon
6. Open a Web browser and type the following URL to open the Monitor:
http://host:port/emsample
Where **host** is the IP or host name where your Application Server is running and **port** is the port used by your Application Server. The login display opens in the Web browser.
Login. The default user name and password are:
User Name: **demo**
Password: **demo**
The main monitor display opens.

UNIX/Linux

1. Copy the **RTView/rtvapm/projects/webapps/emsample.war** file and deploy it to your Application Server.
2. Start your Application Server.
3. Initialize a terminal window. The script used to initialize a terminal window depends on whether you are in `cs`h or `rs`h (e.g. Linux, Mac OS X). With a Bourne shell, open a terminal window, go to your Monitor installation directory and type:

```
.. /rtvapm_init.sh
```

4. Change directory (`cd`) to **RTView/rtvapm_projects/emsample** and type:

```
.. /rtvapm_user_init.sh
```
5. Change directory (`cd`) to **RTView/rtvapm_projects/emsample/servers** and type:

```
start_rtv.sh central  
start_rtv.sh rtvmgr  
start_rtv.sh nodemon
```

6. Open a Web browser and type the following URL to open the Monitor:

http://host:port/emsample

Where **host** is the IP or host name where your Application Server is running and **port** is the port used by your Application Server. The login display opens in the Web browser.

Login. The default user name and password are:

User Name: **demo**

Password: **demo**

The main Monitor display opens.

iPad Safari Limitations

- In the iPad settings for Safari, **JavaScript** must be **ON** and **Block Pop-ups** must be **OFF**. As of this writing, the Thin Client has been tested only on iOS 4.3.5 in Safari.
- The iPad does not support Adobe Flash, so the Fx graph objects (`obj_fxtrend`, `obj_fxpie`, `obj_fxbar`) are unavailable. The Thin Client automatically replaces the Fx graph objects with the equivalent non-Fx object (`obj_trendgraph02`, `obj_pie`, `obj_bargraph`). Note that the replacement objects behave the same as the Fx objects in most cases but not in all. In particular, `obj_trendgraph02` does not support the sliding cursor object nor the **legendPosition** property. Custom Fx objects are not supported on the iPad.
- The Thin Client implements scrollbars for table objects and graph objects. However, unlike the scrollbars used on desktop browsers, the scrollbars used on the iPad do not have arrow buttons at each end. This can make it difficult to scroll precisely (for example, row by row) on objects with a large scrolling range.

- At full size, users may find it difficult to touch the intended display object without accidentally touching nearby objects and performing an unwanted drill-down, sort, scroll, and so forth. This is particularly true of table objects that support drill-down and also scrolling, and also in panel layouts that contain the tree navigation control. In those cases, the user may want to zoom the iPad screen before interacting with the Thin Client.
- If the iPad sleeps or auto-locks while a Thin Client display is open in Safari, or if the Safari application is minimized by clicking on the iPad's home button, the display is not updated until the iPad is awakened and Safari is reopened. In some cases it may be necessary to refresh the page from Safari's navigation bar.

Because the iPad uses a touch interface there are differences in the Thin Client appearance and behavior in iOS Safari as compared to the conventional desktop browsers that use a cursor (mouse) interface, such as Firefox and Internet Explorer. These are described below.

- **Popup browser windows:** An RTView object's drill-down target can be configured to open a display in a new window. In a desktop browser, when the RTView object is clicked the drill-down display is opened in a popup browser window. But in iOS Safari 4.3.5, only one page is visible at a time, so when the RTView object is touched a new page containing the drill-down display opens and fills the screen. The Safari navigation bar can be used to toggle between the currently open pages or close them.
- **Mouseover text:** When mouseover text and drill-down are both enabled on an RTView object (for example, a bar graph), in iOS Safari the first touch on an element in the object (for example, a bar) displays the mouseover text for that element and the second touch on the same element performs the drill-down.
- **Resize Mode and Layout:** By default, the Display Server runs with **resizeMode** set to **crop**. In **crop** mode, if a display is larger than the panel that contains it only a portion of the display is visible. In a desktop browser, scrollbars become available to allow the user to scroll to view the entire display. In iOS Safari, scrollbars do not appear but the display can be scrolled by dragging two fingers inside the display. (Dragging one finger scrolls the entire page, not the display).

If the Display Server is run with **resizeMode** set to **scale** or **layout**, the display is resized to fit into the panel that contains it. If a desktop browser is resized after a display is opened, the display is resized accordingly. On the iPad, the Safari browser can only be resized by reorienting the iPad itself, between portrait mode and landscape mode.

The panel layout feature is supported in the Thin Client. However, unlike a desktop browser which resizes to match the layout size, the size of Safari is fixed. So if the Display Server is run with **resizeMode** set to **crop** or **scale** mode, there may be unused space at the edges of the display(s) or, in **crop** mode, the panels and displays may be cropped.

This means that **layout** mode should be used for best results on the iPad. For layout mode to be most effective, displays should use the **anchor** and **dock** object properties. Please see RTView documentation for more information.

- **Scrolling:** The Thin Client implements scrollbars for table objects and graph objects. The scrollbars are activated by dragging with one finger.

If an RTView display is viewed in **crop** mode and is too large to be displayed entirely in Safari, scrollbars do not appear (as they would in a desktop browser) but the display can be scrolled by dragging with two fingers inside the display.

Scrollbars do not ever appear in a text area control. If the text area contains more text than is visible, use the two finger drag in the text area to scroll the text.

Regardless of the size of a listbox control, it can only display a single item (typically, the selected item). When the listbox is touched, the list of items appear in a popup list. In other words, on iOS Safari the listbox control and the combobox control behave identically.

- Context menu: The Thin Client context menu is opened by a right mouse button click in a desktop browser. It is opened in iOS Safari by touching any location on a display and holding that touch for 2 seconds. The menu appears in the top left corner of the display, regardless of where the display is touched. The items **Export Table to Excel**, **Drill Down**, and **Execute Command** are not included on the context menu in Safari. All other items are available. The **Export Table to HTML** item is enabled if a table object is touched (unless the table object's drillDownTarget is configured to open another display). After an **Export to PDF/HTML** is performed, the exported content opens on another page in Safari. From there, the content can either be opened by another application (for example, the iBooks application opens PDF) and emailed, or it can be copied and pasted into an email.

RTView Server Components as Windows Services

This section describes how to configure an RTView process (Data Server and Historian) to run as a Windows service.

To Configure the Data Server or Historian to run as a Windows Service

1. Add the following lines to the **sample.properties** file.

```
#####
# WINDOWS SERVICES
# Install Misc Monitor servers as Windows services
#
installservice.sl.rtview.cmd_line=-install_service
installservice.sl.rtview.cmd_line=-dir:%RTVAPM_STARTUP%
uninstallservice.sl.rtview.cmd_line=-uninstall_service
#
```

NOTE: The environment variable %RTVAPM_STARTUP% is set by a run script to the directory where the script was started.

2. For each Windows service you want to create, add the following line and replace **name** with a name you choose for the service:

```
name.sl.rtview.cmd_line=service:name
```

Note: Each service must have a unique name and the beginning of the property entered must match the name of the service.

For example, if you choose **MiscMonData** as the name for starting a Data Server as a Windows service.

```
#####
# WINDOWS SERVICES
# Install Misc Monitor servers as Windows services
#
```

```
installservice.sl.rtvview.cmd_line=-install_service
installservice.sl.rtvview.cmd_line=-dir:%RTVAPM_STARTUP%
uninstallservice.sl.rtvview.cmd_line=-uninstall_service
MiscMonData.sl.rtvview.cmd_line=-service:MiscMonData
#
```

To install and run

Execute the following scripts to start the service:

NOTE: These scripts must be run in an initialized command window.

rundata -propfilter:installservice -propfilter:MiscMonData

To uninstall

Execute the following scripts to uninstall the services:

NOTE: These scripts must be run in an initialized command window.

rundata -propfilter:uninstallservice -propfilter:MiscMonData

Troubleshooting

This section includes:

- [“Log Files” on page 21](#)
- [“Verifying Data Received from Data Server” on page 21](#)
- [“Restarting the Data Server” on page 22](#)

Log Files

When the Monitor encounters an error, Monitor components output an error message to the console and/or to the corresponding log files. Log files are located in the **project_directory\logs** directory (for example: **rtvapm_projects\emsample\servers\miscmon\logs**). Look at the following log files on the machine where the components are running:

- **dataserver.log**
- **historian.log**

To enable logging, make sure the directory logs exist in your project directory.

Verifying Data Received from Data Server

Open the **Cache Viewer Display** to verify data is arriving correctly from the Data Server. To access the **Cache Viewer Display**, select the **Admin** tab, choose **Administration** in the navigation tree, then choose **RTView Cache Tables** or the **RTView Cache Overview**. You should see all caches being populated with monitoring data (number of rows > 0). Otherwise, there are problems with the connection to the Data Server.

Restarting the Data Server

If the Viewer, the Display Server or the Historian fails to connect to the Data Server or receives no data, verify the ports are assigned correctly in your properties files and then restart the Data Server.

CHAPTER 5 Using the Monitor

This section describes the Monitor features, graphs, and functionality as well as the Monitor displays. This section includes:

- [“Overview” on page 23](#): Describes the Monitor features and functionality.
- [“Node/Master Views” on page 30](#): The displays in this View present detailed data for all node instances or for a particular node instance.
- [“Node Request Views” on page 35](#): The displays in this View allow you to view data pertaining to requests for a connection and a host, or view trending request data for a particular URL associated with a connection and a host.
- [“Process Views” on page 40](#): The displays in this View allow you to view the current and historical metrics for all node processes in a heatmap or tabular format for one or all hosts, or view the current and historical metrics for a single node process.

Overview

This section describes the main Monitor features, how to read Monitor objects, GUI functionality and navigation. This section includes:

- [“Navigation Tree” on page 23](#): Describes the navigation tree.
- [“Heatmaps” on page 24](#): Describes how to read heatmaps and heatmap functionality.
- [“Tables” on page 25](#): Describes how to read tables and table functionality.
- [“Trend Graphs” on page 26](#): Describes how to read trend graphs and trend graph functionality.
- [“Title Bar” on page 27](#): Describes the top layer of the title bar shared by Monitor displays.
- [“Context Menu” on page 28](#): Describes right-click popup menu in the Monitor.
- [“Multiple Windows” on page 28](#): Describes opening multiple windows in the Monitor.
- [“Export Report” on page 29](#): Describes how to export reports from the Monitor.
- [“” on page 29](#): Describes how to define user-defined host names for your applications.

Navigation Tree

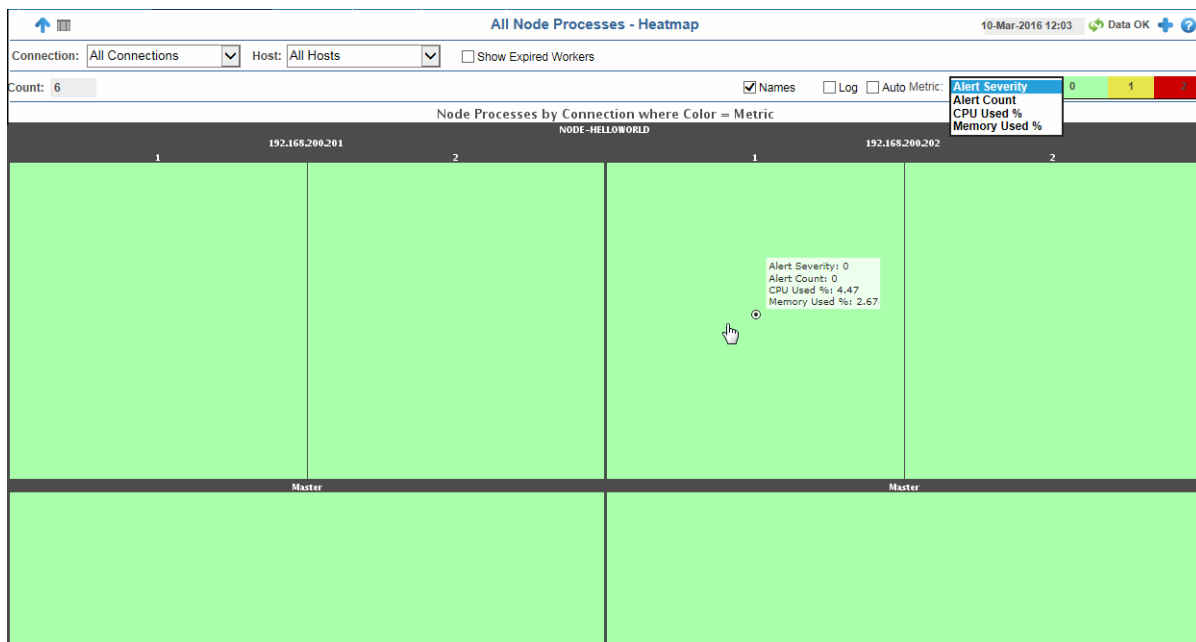

The Monitor navigation tabs are organized by *Views*. Each View features performance data for a type of system resource. Typically, the performance data is shown in a tabular, heatmap, and summary display for each View.

Note: It takes about 60 seconds after the Monitor Data Server is started for data to initially appear in Monitor displays. By default, data is collected every 20 seconds and displays are refreshed every 2 seconds.

Heatmaps

Heatmaps organize your Node.js resources into rectangles and use color to highlight the most critical values in each. Heatmaps enable you to view various metrics in the same heatmap using drop-down menus. Each metric has a color gradient bar that maps relative values to colors. In most heatmaps, the rectangle size represents the number of resources in the rectangle. Heatmaps include drop-down menus by which to filter data. The filtering options vary among heatmaps.

For example, each rectangle in the **All Node Processes Heatmap** represents a node process, where color is representative of the selected **Metric**.

The **Metric** drop-down menu in this heatmap contains options to show **Alert Severity**, **Alert Count**, as well as other metrics. Menu options vary according to the data populating the heatmap. **Alert Severity** is selected and its corresponding color gradient bar is shown. **Alert Severity** is the maximum level of alerts in the heatmap rectangle. Values range from **0** - **2**, as indicated in the color gradient bar, where **2** is the highest **Alert Severity**:

- Red indicates that one or more resources associated with that application currently has an alert in an alarm state.
- Yellow indicates that one or more resources associated with that application currently have an alert in a warning state.
- Green indicates that no resources associated with that application have alerts in a warning or alarm state.

In most heatmaps, you can also drill-down to a *Summary* display containing detailed data for the resource (in this case, you drill-down to detailed data for the selected process in the **Node Process Summary** display). You can also open a new window and then drill-down. The drill-down opens a display that contains relevant and more detailed data.

Trend Graphs

Monitor trend graphs enable you to view and compare performance metrics over time. You can use trend graphs to assess utilization and performance trends.

For example, the following figure illustrates a typical Monitor trend graph.

Time Range

Select a time range from the drop down menu varying from **2 Minutes** to **Last 7 Days**, or display **All Data**. By default, the time range end point is the current time. To enter a specific time range, click the associated ellipsis button .

To change the time range click the Open Calendar button , choose the date and time, then click **OK**. Or, enter the date and time in the text field using the following format: **MMM dd, YYYY HH:MM:ss** (for example, Aug 21, 2011 12:24 PM) and click **Apply**. Use the Navigation Arrows   to move forward or backward one time period (the time period selected from the Time Range drop-down menu). Click **Restore to Now** to reset the time range end point to the current time.

Mouse-over

The mouse-over functionality provides additional detailed data in an over imposed pop-up window when you mouse-over trend graphs. The following figure illustrates mouse-over functionality. In this example, when you mouse-over a single dot, or data point, a pop-up window shows data for that data point.

Log Scale

Typically, trend graphs provide the **Log Scale** option. **Log Scale** enables you to see usage correlations for data with a wide range of values. For example, if a minority of your data is on a scale of tens, and a majority of your data is on a scale of thousands, the minority of your data is typically not visible in non-log scale graphs. **Log Scale** makes data on both scales visible by applying logarithmic values rather than actual values to the data.

Title Bar

Displays share the same top layer in the title bar, as shown below.

The following table describes the functionality in the display title bar.

	Opens the previous display.
	Opens the display that is up one level.
	Navigates to a display that is most commonly accessed from the current display. The target display differs among displays.
	Opens the Alerts Table display in a new window.
	The current date and time. If the time is incorrect, this might indicate that RTView stopped running. When the date and time is correct and the Data OK indicator is green, this is a strong indication that the platform is receiving current and valid data.
	The data connection state. Red indicates the data source is disconnected (for example, if the Data Server is not receiving data, or if the Display Server does not receive data from the Data Server, this will be red). Green indicates the data source is connected. When the date and time is correct and the Data OK indicator is green, this is a strong indication that the platform is receiving current and valid data.

Opens an instance of the same display in a new window. Each window operates independently, allowing you to switch views, navigate to other displays in RTView EM, and compare server performance data.

Opens the online help page for the current display.

Context Menu

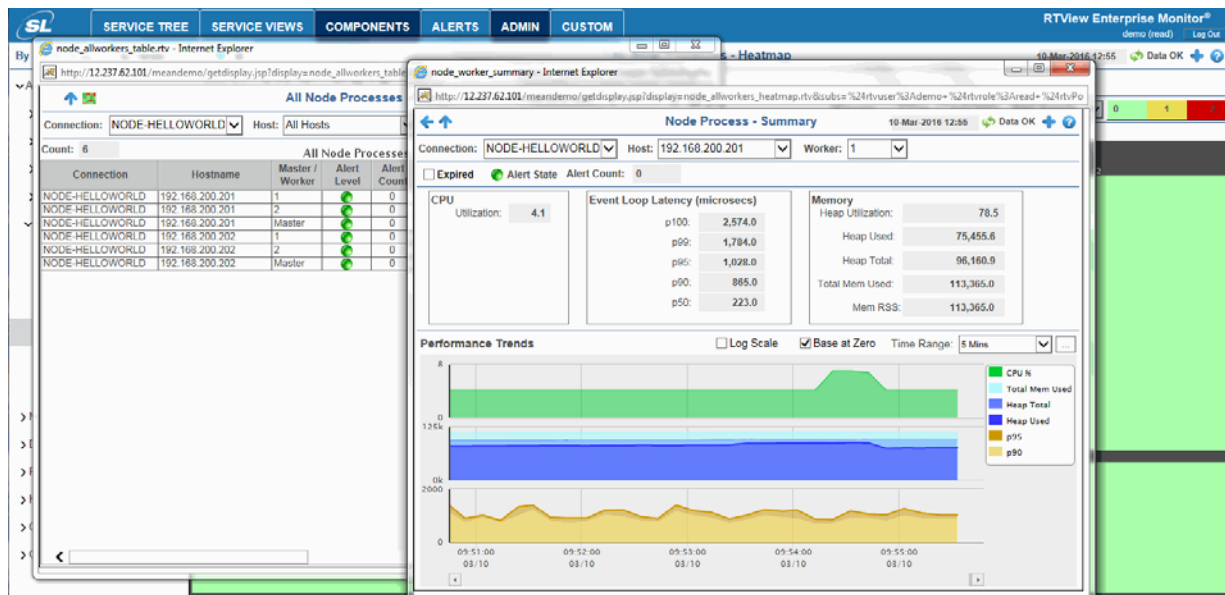

Typically, you can right-click on displays to open a popup menu. By default, options include **Refresh**, **Back**, **Next**, **Execute Command**, **Drill Down**, **Export Table to Excel**, **Export Table to HTML**, **Export PDF**, **Status** and **Log Off**. The following figure illustrates the popup menu in a heatmap.

For details about exporting a PDF report, see [“Export Report” on page 29](#).

Multiple Windows

The following illustrates the use of Open New Window  in the RTView Enterprise Monitor.

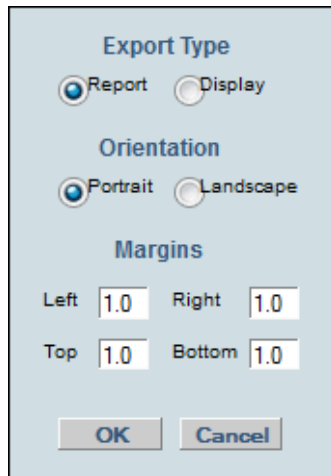

Export Report

You can quickly export reports for displays, or for tables and grid objects in a display, to a PDF file.

To generate a report for a display:

Right-click on the display and select **Export PDF**. The **Export to PDF** dialog opens.

Set the margins and choose the **Export Type**:

- **Report:** Generates an image of the display on the first page, followed by at least one page for each table or object grid in the display. As many pages as are necessary to show all the data in each table or object grid are included in the report. This enables you to view all data in a table or object grid that you otherwise must use a scrollbar to see. If there are no tables or object grids in your display, you only get a image of the display.
- **Display:** Generates an image of the display in PDF format. Choose the page orientation (**Portrait** or **Landscape**), set the page margins and click **OK**. The report opens in a new window.

To generate a report for a table or grid object in a display:

Right-click on the table or grid object and choose **Export PDF**, **Export Table to Excel** or **Export Table to HTML**.

Node/Master Views

These displays provide detailed data for all node instances or for a particular node instance. Displays in this View are:

- [“Node Master Table” on page 30](#): A tabular view of your connected and recently expired node instances and their associated metrics.
- [“Node Master Summary” on page 33](#): Provides a way to view trending data for individual node processes.

Node Master Table

This table provides a view of all your connected (and recently expired) node instances and their associated metric data including host, connection, alert severity, alert count, and the current value of each gathered metric. You can click a column header to sort column data in numerical or alphabetical order, and drill-down and investigate by clicking a row to view details for the selected node in the [“Node Master Summary”](#) display.

Requests

All Node / Master Info - Table

06-May-2016 11:30 Data OK

Connection: All Connections Host: TESTBED-29

Count: 1

Connection	Hostname	Alert Level	Alert Count	Process ID	Uptime	CPU %	Request Count	Requests per sec	Requests Delta	Requests Mean Rate	Requests 1 Min Rate	Requests 5 Min Rate	Requests 15 Min Rate	Expired Workers	Arch
SL_Cluster2	TESTBED-29		0	2549	2d 01:16	1.9	2,483,000	13.33	200	13.999	12.609	13.715	13.905	0	x64

Title Bar: Indicators and functionality might include the following:

	Open the previous display.		Data OK The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.
	Navigate to displays commonly accessed from this display.		Open the Alert Views - RTView Alerts Table display.
	The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the Data OK indicator is green, this is a strong indication that the platform is receiving current and valid data.		Open an instance of this display in a new window.
			Open the online help page for this display.

Note: The **Requests** button takes you to ["Node Requests Table"](#).

Fields and Data:

Connection	Select the name of the connection containing the node instances for which you want to view data.
Host	Select the name of the host containing the node instances for which you want to view data.
Count	The total number of node instances being monitored based on your search criteria.

Table:

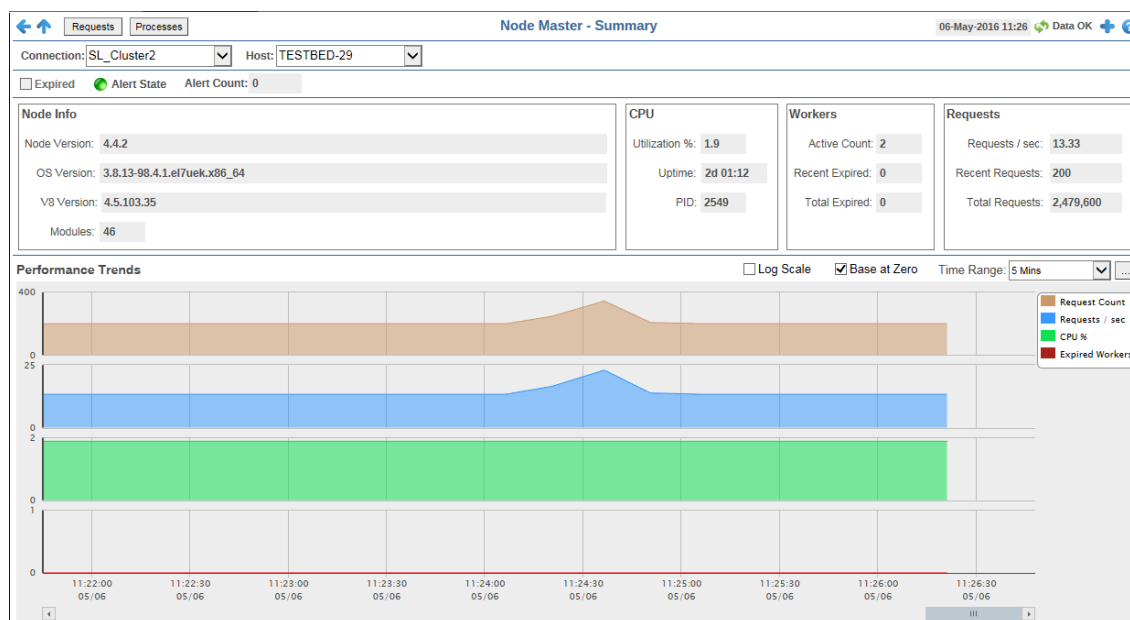

Each row in the table is a different message router.

Connection	The name of the connection.
Host Name	The name of the host.
Alert Level	The current alert severity.  Red indicates that one or more metrics exceeded their ALARM LEVEL threshold.  Yellow indicates that one or more metrics exceeded their WARNING LEVEL threshold.  Green indicates that no metrics have exceeded their alert thresholds.
Alert Count	The total number of current alerts.
Process ID	The process id for the node instance.
Uptime	The amount of time the process has been running.
CPU %	The percentage of CPU used for the process.
Request Count	The total number of requests on the host.
Requests per sec	The average number of requests per second on the host.
Requests Delta	The total number of requests since the last data update.
Requests Mean Rate	The average number of requests for the server since monitoring was started.
Requests 1 Min Rate	The average number of requests for the last minute.

Requests 5 Min Rate	The average number of requests for the last 5 minutes.
Requests 15 min Rate	The average number of requests for the last 15 minutes.
Expired Workers	The number of expired workers on the host since the last data update.
Arch	The CPU architecture of the operating system on the server. Possible values are x64 , arm , and ia32 .
C-ares	The current version of C-ares running on the host.
Http Parser	The current version of the http parser running on the host.
ICU	The current version of ICU running on the host.
Modules	This number of modules found on the host.
Node Ver	The version of node.js running on the host.
Open SSL	The current version of OpenSSL running on the host.
Platform	The operating system's platform. Possible values, among others, are: darwin , linux , sunos , or win32 .
Release	The operating system's release number.
Type	The name of the operating system. Possible values, among others, are Linux on Linux, Darwin on OS X, and Windows_NT on Windows.
UV	The current version of uv running on the host.
V8	The current version of v8 running on the host.
ZLib	The current version of ZLib running on the host.
Expired	<p>When checked, performance data about the node has not been received within the time specified (in seconds) in the \$nodeRowExpirationTime field in the conf\rtvapm_nodemon.properties file. The \$nodeRowExpirationTimeForDelete field allows you to define the amount of time (in seconds) in which the row will be removed from the table if there is no response from the message router. To view/edit the current values, modify the following lines in the .properties file:</p> <pre># Metrics data are considered expired after this number of seconds # collector.sl.rtvapm.sub=\$nodeRowExpirationTime:45 collector.sl.rtvapm.sub=\$nodeRowExpirationTimeForDelete:3600</pre> <p>In the example above, the Expired check box would be checked after 45 seconds, and the row would be removed from the table after 3600 seconds.</p>
Time Stamp	The date and time the row data was last updated.

Node Master Summary

This display allows you to view current CPU, worker, and request data as well as trending data for the number of requests, the number of requests per second, the percentage of CPU being used, and the number of recently expired workers on a particular host.

Title Bar: Indicators and functionality might include the following:

Open the previous and upper display.
 Navigate to displays commonly accessed from this display.
 19-Feb-2014 16:50 The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the **Data OK** indicator is green, this is a strong indication that the platform is receiving current and valid data.

Data OK The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.

Open the **Alert Views - RTView Alerts Table** display.
 Open an instance of this display in a new window.
 Open the online help page for this display.

Note: The **Requests** button takes you to “[Node Requests Table](#)”. The **Processes** button takes you to “[All Processes Table](#)”.

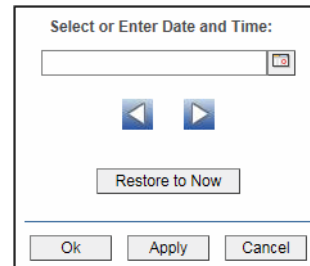

Filter By:

Connection Choose the connection for which you want to show data in the display.
Host Choose the host for which you want to show data in the display.

Fields and Data:

Expired	<p>When checked, performance data about the node has not been received within the time specified (in seconds) in the \$nodeRowExpirationTime field in the conf\rtvapi_nodemon.properties file. The \$nodeRowExpirationTimeForDelete field allows you to define the amount of time (in seconds) in which the row will be removed from the table if there is no response from the message router. To view/edit the current values, modify the following lines in the .properties file:</p> <pre># Metrics data are considered expired after this number of seconds # collector.sl.rtvapi.sub=\$nodeRowExpirationTime:45 collector.sl.rtvapi.sub=\$nodeRowExpirationTimeForDelete:3600</pre> <p>In the example above, the Expired check box would be checked after 45 seconds, and the row would be removed from the table after 3600 seconds.</p>
Alert State	<p>The current alert severity.</p> <ul style="list-style-type: none">  Red indicates that one or more metrics exceeded their ALARM LEVEL threshold.  Yellow indicates that one or more metrics exceeded their WARNING LEVEL threshold.  Green indicates that no metrics have exceeded their alert thresholds.
Alert Count	The total number of current alerts.
Node Info	
Node Version	The version of node.js running on the host.
OS Version	The operating system's version number.
V8 Version	The current version of v8 running on the host.
Modules	This number of modules found on the host.
CPU	
Utilization %	The percentage of memory used on the CPU.
Uptime	The amount of time the process has been running.
PID	The process id for the node instance.
Workers	
Active Count	The current number of active workers on the host.
Recent Expired	The number of expired workers on the host since the last data update.
Total Expired	The total number of expired workers on the host.
Requests	
Requests / sec	The average number of requests per second on the host.
Recent Requests	The total number of requests since the last data update.
Total Requests	The total number of requests on the host.
Performance Trends Graph	<p>Traces the following:</p> <ul style="list-style-type: none"> Request Count -- traces the number of requests on the host. Requests / sec -- traces the number of requests/sec on the host. CPU % -- traces the percentage of CPU being used on the host. Expired Workers -- traces the number of expired workers on the host.

- Log Scale** Select to enable a logarithmic scale. Use **Log Scale** to see usage correlations for data with a wide range of values. For example, if a minority of your data is on a scale of tens, and a majority of your data is on a scale of thousands, the minority of your data is typically not visible in non-log scale graphs. **Log Scale** makes data on both scales visible by applying logarithmic values rather than actual values to the data.
- Base at Zero** Select to use zero (0) as the Y axis minimum for all graph traces.
- Time Range** Select a time range from the drop down menu varying from **2 Minutes** to **Last 7 Days**, or display **All Data**. To specify a time range, click Calendar .

By default, the time range end point is the current time. To change the time range end point, click Calendar  and select a date and time from the calendar or enter the date and time in the text field using the following format: **MMM dd, YYYY HH:MM**. For example, **Aug 21, 2011 12:24 PM**.

Use the navigation arrows   to move forward or backward one time period. NOTE: The time period is determined by your selection from the **Time Range** drop-down menu.

Click **Restore to Now** to reset the time range end point to the current time.

Node Request Views

You can view data pertaining to requests for a connection and host, or view trending request data for a particular URL associated with a connection and a host. Displays in this View are:

- [“Node Requests Table” on page 35](#): A tabular view of request data for one or all hosts on a particular connection.
- [“Node Request Summary” on page 37](#): Allows you to view trending data (number of requests, number of requests per second, and average response time) for individual URLs by connection and host.

Node Requests Table

This display allows you to view request data for one or all hosts on a particular connection. You can view the request URL, total number of requests, number of requests per second, the average response time, and the number of recent requests for each host.

Drill-down and investigate by clicking a row to view details for the selected host in the [“Node Request Summary”](#) display.

Connection	Host	Request URL	Total Requests	Requests Per Sec	Avg Response Time (ms)	Recent Requests	Timestamp
NODE-HELLOWORLD	192.168.200.201	/templates/footer.html	303	0.00	0.00	0	08-Mar-2016 16:33:56
NODE-HELLOWORLD	192.168.200.202	/templates/home.html	505	0.00	0.00	0	08-Mar-2016 16:33:52

Title Bar: Indicators and functionality might include the following:

Open the previous and upper display.
 Navigate to displays commonly accessed from this display.
 The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the **Data OK** indicator is green, this is a strong indication that the platform is receiving current and valid data.

Data OK The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.

Open the **Alert Views - RTView Alerts Table** display.

Open an instance of this display in a new window.

Open the online help page for this display.

Note: The **Masters** button takes you to ["Node Master Table"](#).

Filter By:

The display might include these filtering options:

Connection Select the connection for which you want to view data.

Host Select the host for which you want to view data.

Fields and Data:

Count: The total number of nodes (rows) in the table.

Table:

Column values describe the node and its associated requests.

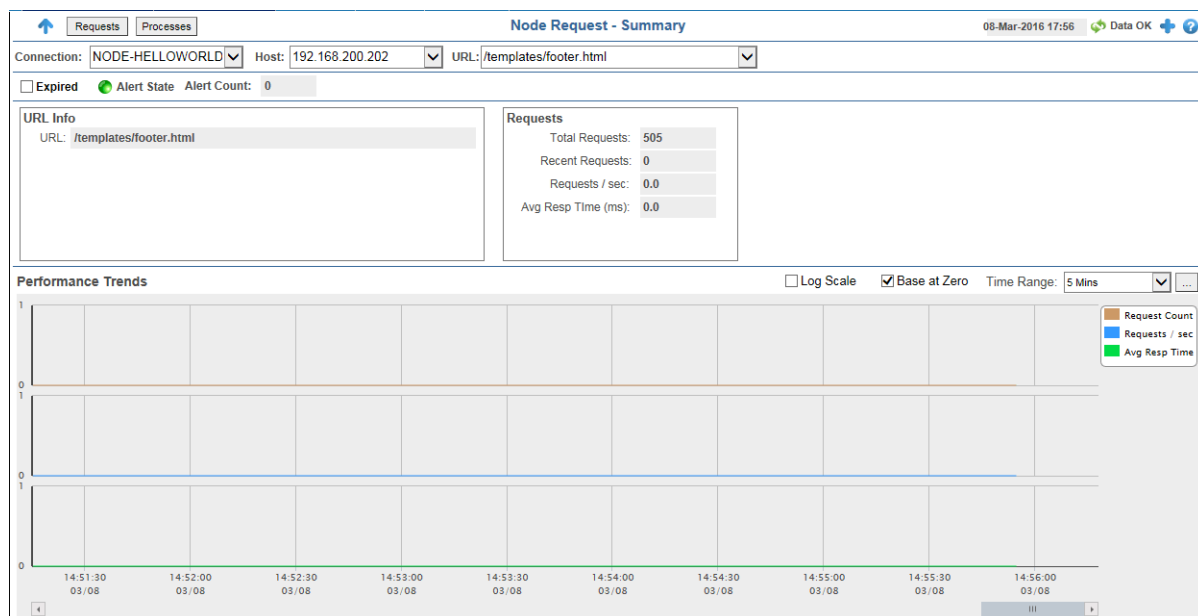

Connection The name of the connection

Host The name of the host.

Request URL	The URL from which the requests originated.
Total Requests	The total number of requests.
Requests Per Sec	The average number of requests per second.
Avg Response Time	The average response time since the last data update.
Recent Requests	The total number of requests since the last data update.
Time Stamp	The date and time the row data was last updated.

Node Request Summary

This display allows you to view trending data (number of requests, number of requests per second, and average response time) for individual URLs by connection and host.

Title Bar: Indicators and functionality might include the following:

 Open the previous and upper display.
 Navigate to displays commonly accessed from this display.
 19-Feb-2014 16:50 The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the **Data OK** indicator is green, this is a strong indication that the platform is receiving current and valid data.

 **Data OK** The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.

 Open the **Alert Views - RTView Alerts Table** display.

 Open an instance of this display in a new window.

 Open the online help page for this display.

Note: The **Requests** button takes you to "[Node Requests Table](#)". The **Processes** button takes you to "[All Processes Table](#)".

Filter By:

Connection	Select the connection for which you want to show data in the display.
Host	Select the host for which you want to show data in the display.
URL	Select the URL for which you want to view data.

Fields and Data:

Expired When checked, performance data about the node has not been received within the time specified (in seconds) in the **\$nodeRowExpirationTime** field in the **conf\rtvapi_nodemon.properties** file. The **\$nodeRowExpirationTimeForDelete** field allows you to define the amount of time (in seconds) in which the row will be removed from the table if there is no response from the message router. To view/edit the current values, modify the following lines in the **.properties** file:

```
# Metrics data are considered expired after this number of seconds
#
collector.sl.rtvapi.sub=$nodeRowExpirationTime:45
collector.sl.rtvapi.sub=$nodeRowExpirationTimeForDelete:3600
```

In the example above, the **Expired** check box would be checked after 45 seconds, and the row would be removed from the table after 3600 seconds.

Alert State The current alert severity.
 Red indicates that one or more metrics exceeded their ALARM LEVEL threshold.
 Yellow indicates that one or more metrics exceeded their WARNING LEVEL threshold.
 Green indicates that no metrics have exceeded their alert thresholds.

Alert Count The total number of current alerts.

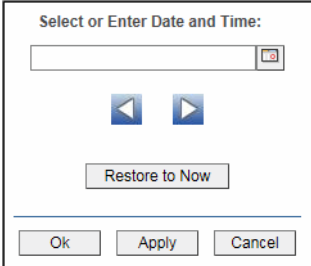

URL Info

URL The URL from which the requests originated.

Requests

Total Requests The total number of requests.

Performance Trends Graph	Recent Requests	The total number of requests since the last data update.
	Requests / sec	The average number of requests per second.
	Avg Resp Time	The average response time since the last data update.
	Traces the following:	
	Request Count	-- traces the total number of requests.
	Requests / sec	-- traces the average number of requests per second.
	Avg Resp Time	-- traces the average response time.
	Log Scale	Select to enable a logarithmic scale. Use Log Scale to see usage correlations for data with a wide range of values. For example, if a minority of your data is on a scale of tens, and a majority of your data is on a scale of thousands, the minority of your data is typically not visible in non-log scale graphs. Log Scale makes data on both scales visible by applying logarithmic values rather than actual values to the data.
	Base at Zero	Select to use zero (0) as the Y axis minimum for all graph traces.
	Time Range	Select a time range from the drop down menu varying from 2 Minutes to Last 7 Days , or display All Data . To specify a time range, click Calendar  .

The dialog box titled "Select or Enter Date and Time:" contains a text input field with a calendar icon on the right. Below the input field are two blue navigation arrows (left and right). Underneath the arrows is a button labeled "Restore to Now". At the bottom of the dialog are three buttons: "Ok", "Apply", and "Cancel".

By default, the time range end point is the current time. To change the time range end point, click Calendar  and select a date and time from the calendar or enter the date and time in the text field using the following format: **MMM dd, YYYY HH:MM**. For example, **Aug 21, 2011 12:24 PM**.

Use the navigation arrows   to move forward or backward one time period. NOTE: The time period is determined by your selection from the **Time Range** drop-down menu.

Click **Restore to Now** to reset the time range end point to the current time.

Process Views

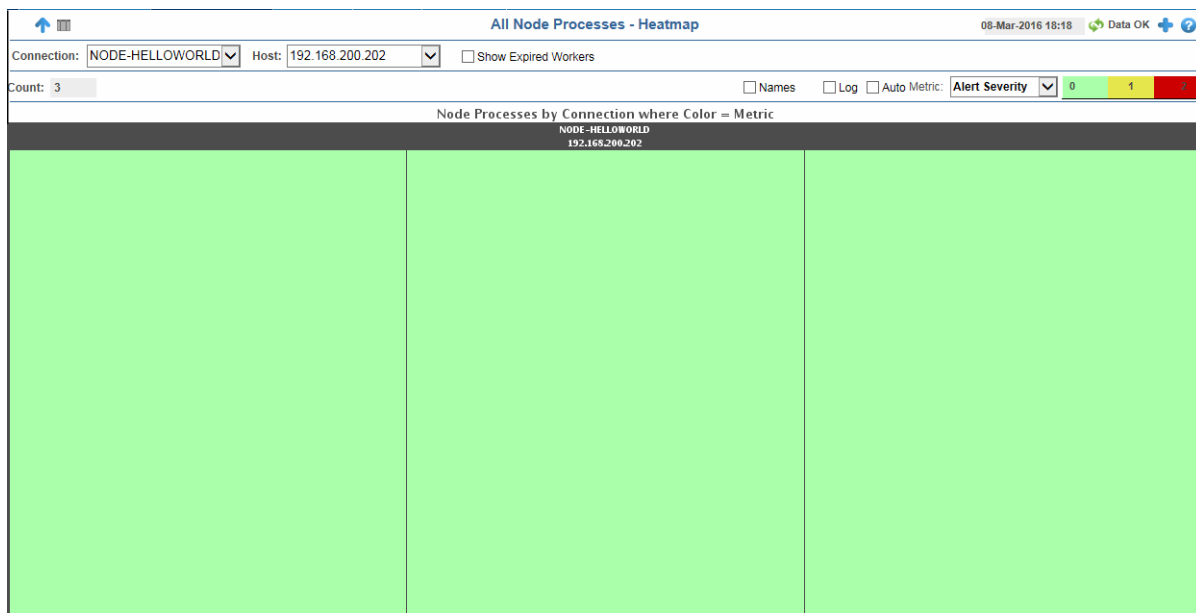

These displays allow you to view the current and historical metrics for all node processes in a heatmap or tabular format for one or all hosts, or view the current and historical metrics for a single node process. Displays in this View are:

- [“All Processes Heatmap” on page 40](#): A color-coded heatmap view of data for all node processes for a particular connection/host combination.
- [“All Processes Table” on page 42](#): A tabular view of data for all node processes for a particular connection/host combination.
- [“Process Summary” on page 44](#): This display allows you to view current and trending data for a single node process for a particular connection/host combination.

All Processes Heatmap

This heatmap display provides an easy-to-view interface that allows you to quickly identify the current status of each of your node processes for each available metric. You can view the node processes in the heatmap based on the following metrics: the current alert severity, the current alert count, the percentage of CPU used, and the percentage of memory used. By default, this display shows the heatmap based on the **Alert Severity** metric.

You can use the **Names** check-box ☒ to include or exclude labels in the heatmap, and you can mouse over a rectangle to see additional metrics for a node process. Clicking one of the rectangles in the heatmap opens the [“Process Summary”](#) display, which allows you to see additional details for the selected node process.

Title Bar: Indicators and functionality might include the following:

	Open the previous display.		The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.
	Navigate to displays commonly accessed from this display.		Open the Alert Views - RTView Alerts Table display.
			Open an instance of this display in a new window.
	The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the Data OK indicator is green, this is a strong indication that the platform is receiving current and valid data.		Open the online help page for this display.

Fields and Data:

Connection	Select the connection for which you want to show data in the display.
Host	Select the host for which you want to show data in the display.
Show Expired Workers	Select this check box to view expired workers in the heatmap.
Count	Lists the total number of processes (rows) found using the search parameters.
Names	Select this check box to display the names of the processes at the top of each rectangle in the heatmap.
Log	Select to this check box to enable a logarithmic scale. Use Log Scale to see usage correlations for data with a wide range of values. For example, if a minority of your data is on a scale of tens, and a majority of your data is on a scale of thousands, the minority of your data is typically not visible in non-log scale graphs. Log Scale makes data on both scales visible by applying logarithmic values rather than actual values to the data.
Auto	Select to enable auto-scaling. When auto-scaling is activated, the color gradient bar's maximum range displays the highest value. Note: Some metrics auto-scale automatically, even when Auto is not selected.
Metric	Choose a metric to view in the display.
Alert Severity	<p>The current alert severity. Values range from 0 - 2, as indicated in the color gradient  bar, where 2 is the highest Alert Severity:</p> <ul style="list-style-type: none">  Red indicates that one or more metrics exceeded their ALARM LEVEL threshold.  Yellow indicates that one or more metrics exceeded their WARNING LEVEL threshold.  Green indicates that no metrics have exceeded their alert thresholds.
Alert Count	<p>The total number of critical and warning unacknowledged alerts in the instance. The color gradient  bar, populated by the current heatmap, shows the value/color mapping. The numerical values in the gradient bar range from 0 to the maximum count of alerts in the heatmap. The middle value in the gradient bar indicates the average alert count.</p>

CPU Used %

The percentage of CPU used. The color gradient  bar, populated by the current heatmap, shows the value/color mapping. The numerical values in the gradient bar range from 0 to the defined alert threshold of **NodeProcessCpuUsageHigh**. The middle value in the gradient bar indicates the middle value of the range.

When **Auto** is checked, the numeric values in the color gradient bar show the range of the data being displayed rather than the default values. The middle value changes accordingly to indicate the color of the middle value of the range.

Memory Used %

The total percentage of memory used. The color gradient  bar, populated by the current heatmap, shows the value/color mapping. The numerical values in the gradient bar range from 0 to the defined alert threshold of **NodeProcessMemUsageHigh**. The middle value in the gradient bar indicates the middle value of the range.

When **Auto** is checked, the numeric values in the color gradient bar show the range of the data being displayed rather than the default values. The middle value changes accordingly to indicate the color of the middle value of the range.

All Processes Table

This display allows you to view memory, heap memory, and latency data for all processes in a table format. You can drill-down and view the details in the “[Process Summary](#)” display for a specific process by clicking on a row in the resulting table.

Title Bar: Indicators and functionality might include the following:

	Open the previous display.		Data OK The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.
	Navigate to displays commonly accessed from this display.		Open the Alert Views - RTView Alerts Table display.
			Open an instance of this display in a new window.
	The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the Data OK indicator is green, this is a strong indication that the platform is receiving current and valid data.		Open the online help page for this display.

Filter By:

The display includes these filtering options:

Connection	Select the connection for which you want to show data in the display.
Host	Select the host for which you want to show data in the display.
Show Expired Workers	Select this check box to view expired workers in the table.
Count	Lists the total number of processes (rows) found using the search parameters.

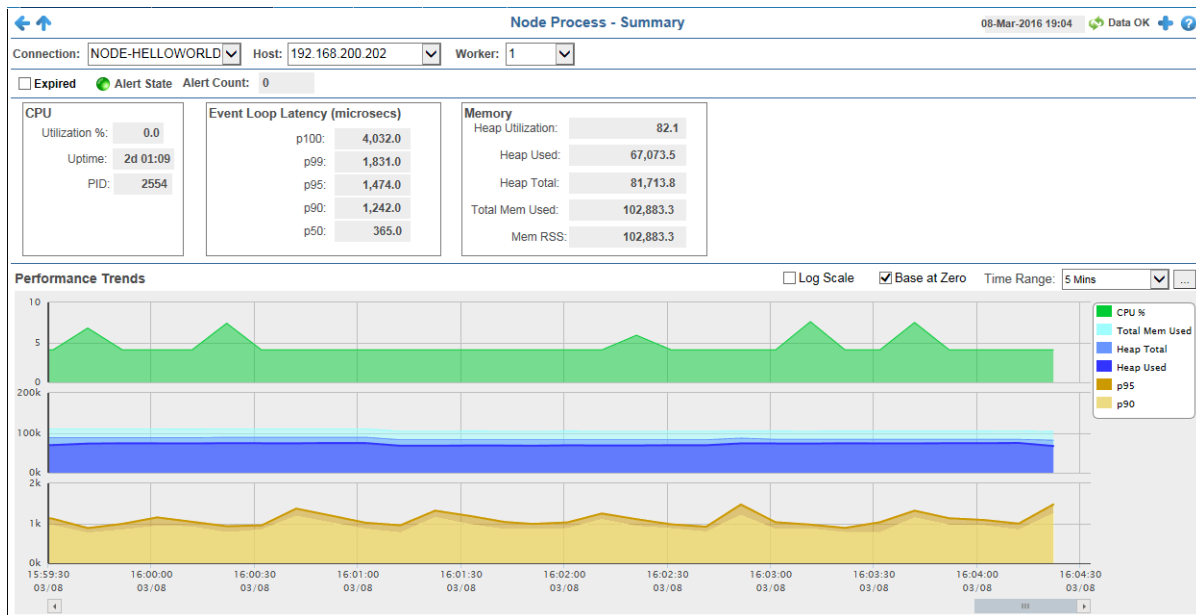

Fields and Data:

Connection	The name of the connection.
Hostname	The name of the host.
Master / Worker	Displays whether the process is the Master process or, if the application is clustered, the worker ID.
Alert Level	The current alert status.  Red indicates that one or more metrics exceeded their ALARM LEVEL threshold.  Yellow indicates that one or more metrics exceeded their WARNING LEVEL threshold.  Green indicates that no metrics have exceeded their alert thresholds.
Alert Count	Total number of alerts for the process.
Uptime	Lists the amount of time the process has been up and running.
CPU %	A decimal percentage describing how much the process utilizes the CPU.
Process ID	The process ID.
Memory Used (KB)	The used memory as a fraction of total system memory, in kilobytes.
Memory Used %	The percentage of total available memory used.
Memory RSS (KB)	The Resident Set Size, which is the portion of memory held in RAM (as opposed to swap or disk), in kilobytes.
Heap Total (KB)	The total amount of heap memory from which newly created objects will originate, in kilobytes.
Heap Free (KB)	The amount of memory remaining from which newly created objects will originate, in kilobytes.

Heap Used (KB)	The heap memory currently in use, in kilobytes.
Heap Used %	The percentage of heap memory currently being used.
Heap Avail (KB)	The v8 engine's total_available_size value, in kilobytes.
Heap Limit (KB)	The v8 engine's heap_size_limit value, in kilobytes.
Heap Total Executable (KB)	The v8 engine's total_heap_size_executable value, in kilobytes.
Latency p100	The number of microseconds that 100 percent of events were late in the previous 4 seconds.
Latency p99	The number of microseconds that 99 percent of events were late in the previous 4 seconds.
Latency p95	The number of microseconds that 95 percent of events were late in the previous 4 seconds.
Latency p90	The number of microseconds that 90 percent of events were late in the previous 4 seconds.
Latency p50	The number of microseconds that 50 percent of events were late in the previous 4 seconds.
Lag	The average number of milliseconds a request has to wait in the Node's event queue before being processed. An excess lag means that the process is overloaded.
time_stamp	The date and time the row data was last updated.
Expired	<p>When checked, performance data about the client has not been received within the time specified (in seconds) in the \$nodeRowExpirationTime field in the conf\rtvapm_nodememon.properties file. The \$nodeRowExpirationTimeForDelete field allows you to define the amount of time (in seconds) in which the row will be removed from the table if there is no response from the client. To view/edit the current values, modify the following lines in the .properties file:</p> <pre># Metrics data are considered expired after this number of seconds # collector.sl.rtvview.sub=\$nodeRowExpirationTime:45 collector.sl.rtvview.sub=\$nodeRowExpirationTimeForDelete:3600</pre> <p>In the example above, the Expired check box would be checked after 45 seconds, and the row would be removed from the table after 3600 seconds.</p>

Process Summary

This display provides a view of the current and historical metrics for a single process. You can view the current information pertaining to a particular URL and various request data for the node process in the upper portion of the display. The trend graph in the bottom half of the display contains the current and historical number of requests, the number of requests per second, and the average response time for the node process.

Title Bar: Indicators and functionality might include the following:

Open the previous and upper display.
 Navigate to displays commonly accessed from this display.
 The current date and time. When the time is incorrect, this might indicate that RTView stopped running. When the time is correct and the **Data OK** indicator is green, this is a strong indication that the platform is receiving current and valid data.

Data OK The data connection state. Red indicates the data source is disconnected (for example, the Data Server is not receiving data, or the Display Server is not receiving data from the Data Server). Green indicates the data source is connected.

Open the **Alert Views - RTView Alerts Table** display.

Open an instance of this display in a new window.

Open the online help page for this display.

Filter By:

The display might include these filtering options:

Connection	Select the connection for which you want to show data in the display.
Host	Select the host for which you want to show data in the display.
Worker	Select the name of the worker to view. You can select from Master or any of the worker processes created by the Master. Worker processes are defined by numbers: 1 for the first worker process created by the Master , 2 for the second worker process created by the Master , and so on.

Expired When checked, performance data about the client has not been received within the time specified (in seconds) in the **\$nodeRowExpirationTime** field in the **conf\rtvpm_nodemon.properties** file. The **\$nodeRowExpirationTimeForDelete** field allows you to define the amount of time (in seconds) in which the row will be removed from the table if there is no response from the client. To view/edit the current values, modify the following lines in the **.properties** file:

```
# Metrics data are considered expired after this number of seconds
#
collector.sl.rtvview.sub=$nodeRowExpirationTime:45
collector.sl.rtvview.sub=$nodeRowExpirationTimeForDelete:3600
```

In the example above, the **Expired** check box would be checked after 45 seconds, and the row would be removed from the table after 3600 seconds.

Alert State The current alert state of the process.

-  Red indicates that one or more metrics exceeded their ALARM LEVEL threshold.
-  Yellow indicates that one or more metrics exceeded their WARNING LEVEL threshold.
-  Green indicates that no metrics have exceeded their alert thresholds.

Alert Count Lists the total number of alerts for the process.

CPU

Utilization %	A decimal percentage describing how much the process utilizes the CPU.
Uptime	Lists the amount of time the process has been up and running.
PID	The process ID.

Event Loop Latency (microsecs)

p100	The number of microseconds that 100 percent of events were late in the previous 4 seconds.
p99	The number of microseconds that 99 percent of events were late in the previous 4 seconds.
p95	The number of microseconds that 95 percent of events were late in the previous 4 seconds.
p90	The number of microseconds that 90 percent of events were late in the previous 4 seconds.
p50	The number of microseconds that 50 percent of events were late in the previous 4 seconds.

Memory

Heap Utilization	The decimal percentage of utilized heap space.
Heap Used	The heap memory currently in use, in kilobytes.
Heap Total	The total amount of memory from which newly created objects can originate, in kilobytes.
Total Mem Used	The used memory as a fraction of total system memory, in kilobytes.
Mem RSS	Resident Set Size, which is the portion of memory held in RAM (as opposed to swap or disk), in kilobytes.

Performance Trends Graph

Traces the following:

CPU %-- traces the CPU utilization percentage.

Total Mem Used-- traces the amount of memory used.

Heap Total-- traces the total amount of available heap memory.

Heap Used-- traces the amount of used heap memory.

p95 -- traces the number of microseconds that 95 percent of events were late in the previous 4 seconds.

p90 -- traces number of microseconds that 90 percent of events were late in the previous 4 seconds.

Log Scale

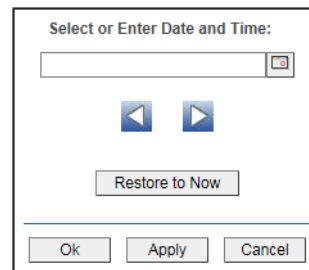

Select to enable a logarithmic scale. Use **Log Scale** to see usage correlations for data with a wide range of values. For example, if a minority of your data is on a scale of tens, and a majority of your data is on a scale of thousands, the minority of your data is typically not visible in non-log scale graphs. **Log Scale** makes data on both scales visible by applying logarithmic values rather than actual values to the data.

Base at Zero

Select to use zero (0) as the Y axis minimum for all graph traces.

Time Range

Select a time range from the drop down menu varying from **2 Minutes** to **Last 7 Days**, or display **All Data**. To specify a time range, click Calendar .

The dialog box titled "Select or Enter Date and Time:" contains a text input field with a calendar icon on the right. Below the input field are two blue navigation arrows (left and right). Underneath these arrows is a button labeled "Restore to Now". At the bottom of the dialog are three buttons: "Ok", "Apply", and "Cancel".

By default, the time range end point is the current time. To change the time range end point, click Calendar  and select a date and time from the calendar or enter the date and time in the text field using the following format: **MMM dd, YYYY HH:MM**. For example, **Aug 21, 2011 12:24 PM**.

Use the navigation arrows   to move forward or backward one time period. NOTE: The time period is determined by your selection from the **Time Range** drop-down menu.

Click **Restore to Now** to reset the time range end point to the current time.

APPENDIX A Alert Definitions

This section describes alerts for Node.js and their default settings.

Alert Name	WARN. LEVEL	ALARM LEVEL	DURATION	ENABLED
NodeMasterCpuUsageHigh A master node's CPU usage is above the defined thresholds. Index Type(s): PerConnection Metric: Node Master - CPU %	30	50	30	FALSE
NodeMasterExpired A master node has expired. Index Type(s): PerConnection Metric: Node Master - Expired	NaN	NaN	30	FALSE
NodeMasterRequestRateHigh The request rate of a master node is above the defined thresholds. Index Type(s): PerConnection Metric: Node Requests - Requests Per Second	1600	2000	30	FALSE
NodeMasterResponseTimeHigh The response time of a URL is above the defined thresholds. Index Type(s): PerConnection Metric: Node Requests - Avg Response Time	5	10	30	FALSE
NodeProcessCpuUsageHigh A worker node's CPU usage is above the defined thresholds. Index Type(s): PerConnection Metric: Node Processes - CPU Used %	5	50	30	TRUE
NodeProcessExpired A worker node has expired. Index Type(s): PerConnection Metric: Node Processes - Expired	NaN	NaN	30	FALSE
NodeProcessMemUsageHigh A master node's memory usage has exceeded the defined limits. Index Type(s): PerConnection Metric: Node Processes - Memory Used %	90	95	30	TRUE

APPENDIX B Third Party Notice Requirements

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below)

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. **Submission of Contributions.** Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. **Trademarks.** This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. **Disclaimer of Warranty.** Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

MOZILLA PUBLIC LICENSE

Version 1.1

1. Definitions.

1.0.1. "Commercial Use" means distribution or otherwise making the Covered Code available to a third party.

1.1. "Contributor" means each entity that creates or contributes to the creation of Modifications.

1.2. "Contributor Version" means the combination of the Original Code, prior Modifications used by a Contributor, and the Modifications made by that particular Contributor.

1.3. "Covered Code" means the Original Code or Modifications or the combination of the Original Code and Modifications, in each case including portions thereof.

1.4. "Electronic Distribution Mechanism" means a mechanism generally accepted in the software development community for the electronic transfer of data.

1.5. "Executable" means Covered Code in any form other than Source Code.

1.6. "Initial Developer" means the individual or entity identified as the Initial Developer in the Source Code notice required by Exhibit A.

1.7. "Larger Work" means a work which combines Covered Code or portions thereof with code not governed by the terms of this License.

1.8. "License" means this document.

1.8.1. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. "Modifications" means any addition to or deletion from the substance or structure of either the Original Code or any previous Modifications. When Covered Code is released as a series of files, a Modification is:

A. Any addition to or deletion from the contents of a file containing Original Code or previous Modifications.

B. Any new file that contains any part of the Original Code or previous Modifications.

1.10. "Original Code" means Source Code of computer software code which is described in the Source Code notice required by Exhibit A as Original Code, and which, at the time of its release under this License is not already Covered Code governed by this License.

1.10.1. "Patent Claims" means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

1.11. "Source Code" means the preferred form of the Covered Code for making modifications to it, including all modules it contains, plus any associated interface definition files, scripts used to control compilation and installation of an Executable, or source code differential comparisons against either the Original Code or another well known, available Covered Code of the Contributor's choice. The Source Code can be in a compressed or archival form, provided the appropriate decompression or de-archiving software is widely available for no charge.

1.12. "You" (or "Your") means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License or a future version of this License issued under Section 6.1. For legal entities, "You" includes any entity which controls, is controlled by, or is under common control with You. For purposes of this definition, "control" means (a) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. Source Code License.

2.1. The Initial Developer Grant.

The Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license, subject to third party intellectual property claims:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer to use, reproduce, modify, display, perform, sublicense and distribute the Original Code (or portions thereof) with or without Modifications, and/or as part of a Larger Work; and

(b) under Patents Claims infringed by the making, using or selling of Original Code, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Code (or portions thereof).

(c) the licenses granted in this Section 2.1(a) and (b) are effective on the date Initial Developer first distributes Original Code under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: 1) for code that You delete from the Original Code; 2) separate from the Original Code; or 3) for infringements caused by: i) the modification of the Original Code or ii) the combination of the Original Code with other software or devices.

2.2. Contributor Grant.

Subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor, to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof) either on an unmodified basis, with other Modifications, as Covered Code and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: 1) Modifications made by that Contributor (or portions thereof); and 2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) the licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first makes Commercial Use of the Covered Code.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: 1) for any code that Contributor has deleted from the Contributor Version; 2) separate from the Contributor Version; 3) for infringements caused by: i) third party modifications of Contributor Version or ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or 4) under Patent Claims infringed by Covered Code in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Application of License.

The Modifications which You create or to which You contribute are governed by the terms of this License, including without limitation Section 2.2. The Source Code version of Covered Code may be distributed only under the terms of this License or a future version of this License released under Section 6.1, and You must include a copy of this License with every copy of the Source Code You distribute. You may not offer or impose any terms on any Source Code version that alters or restricts the applicable version of this License or the recipients' rights hereunder. However, You may include an additional document offering the additional rights described in Section 3.5.

3.2. Availability of Source Code.

Any Modification which You create or to which You contribute must be made available in Source Code form under the terms of this License either on the same media as an Executable version or via an accepted Electronic Distribution Mechanism to anyone to whom you made an Executable version available; and if made available via Electronic Distribution Mechanism, must remain available for at least twelve (12) months after the date it initially became available, or at least six (6) months after a subsequent version of that particular Modification has been made available to such recipients. You are responsible for ensuring that the Source Code version remains available even if the Electronic Distribution Mechanism is maintained by a third party.

3.3. Description of Modifications.

You must cause all Covered Code to which You contribute to contain a file documenting the changes You made to create that Covered Code and the date of any change. You must include a prominent statement that the Modification is derived, directly or indirectly, from Original Code provided by the Initial Developer and including the name of the Initial Developer in (a) the Source Code, and (b) in any notice in an Executable version or related documentation in which You describe the origin or ownership of the Covered Code.

3.4. Intellectual Property Matters

(a) Third Party Claims.

If Contributor has knowledge that a license under a third party's intellectual property rights is required to exercise the rights granted by such Contributor under Sections 2.1 or 2.2, Contributor must include a text file with the Source Code distribution titled "LEGAL" which describes the claim and the party making the claim in sufficient detail that a recipient will know whom to contact. If Contributor obtains such knowledge after the Modification is made available as described in Section 3.2, Contributor shall promptly modify the LEGAL file in all copies Contributor makes available thereafter and shall take other steps (such as notifying appropriate mailing lists or newsgroups) reasonably calculated to inform those who received the Covered Code that new knowledge has been obtained.

(b) Contributor APIs.

If Contributor's Modifications include an application programming interface and Contributor has knowledge of patent licenses which are reasonably necessary to implement that API, Contributor must also include this information in the LEGAL file.

(c) Representations.

Contributor represents that, except as disclosed pursuant to Section 3.4(a) above, Contributor believes that Contributor's Modifications are Contributor's original creation(s) and/or Contributor has sufficient rights to grant the rights conveyed by this License.

3.5. Required Notices.

You must duplicate the notice in Exhibit A in each file of the Source Code. If it is not possible to put such notice in a particular Source Code file due to its structure, then You must include such notice in a location (such as a relevant directory) where a user would be likely to look for such a notice. If You created one or more Modification(s) You may add your name as a Contributor to the notice described in Exhibit A. You must also duplicate this License in any documentation for the Source Code where You describe recipients' rights or ownership rights relating to Covered Code. You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Code. However, You may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.6. Distribution of Executable Versions.

You may distribute Covered Code in Executable form only if the requirements of Section 3.1-3.5 have been met for that Covered Code, and if You include a notice stating that the Source Code version of the Covered Code is available under the terms of this License, including a description of how and where You have fulfilled the obligations of Section 3.2. The notice must be conspicuously included in any notice in an Executable version, related documentation or collateral in which You describe recipients' rights relating to the Covered Code. You may distribute the Executable version of Covered Code or ownership rights under a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable version does not attempt to limit or alter the recipient's rights in the Source Code version from the rights set forth in this License. If You distribute the Executable version under a different license You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or any Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

3.7. Larger Works.

You may create a Larger Work by combining Covered Code with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Code.

4. Inability to Comply Due to Statute or Regulation.

If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Covered Code due to statute, judicial order, or regulation then You must: (a) comply with the terms of this License to the maximum extent possible; and (b) describe the limitations and the code they affect. Such description must be included in the LEGAL file described in Section 3.4 and must be included with all distributions of the Source Code. Except to the extent prohibited by statute or regulation, such description must be sufficiently detailed for a recipient of ordinary skill to be able to understand it.

5. Application of this License.

This License applies to code to which the Initial Developer has attached the notice in Exhibit A and to related Covered Code.

6. Versions of the License.

6.1. New Versions.

Netscape Communications Corporation ("Netscape") may publish revised and/or new versions of the License from time to time. Each version will be given a distinguishing version number.

6.2. Effect of New Versions.

Once Covered Code has been published under a particular version of the License, You may always continue to use it under the terms of that version. You may also choose to use such Covered Code under the terms of any subsequent version of the License published by Netscape. No one other than Netscape has the right to modify the terms applicable to Covered Code created under this License.

6.3. Derivative Works.

If You create or use a modified version of this License (which you may only do in order to apply it to code which is not already Covered Code governed by this License), You must (a) rename Your license so that the phrases "Mozilla", "MOZILLAPL", "MOZPL", "Netscape", "MPL", "NPL" or any confusingly similar phrase do not appear in your license (except to note that your licensed differs from this License) and (b) otherwise make it clear that Your version of the license contains terms which differ from the Mozilla Public License and Netscape Public License. (Filling in the name of the Initial Developer, Original Code or Contributor in the notice described in Exhibit A shall not of themselves be deemed to be modifications of this License.)

7. DISCLAIMER OF WARRANTY.

COVERED CODE IS PROVIDED UNDER THIS LICENSE ON AN "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED CODE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED CODE IS WITH YOU. SHOULD ANY COVERED CODE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED CODE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

8. TERMINATION.

8.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses to the Covered Code which are properly granted shall survive any termination of this License. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

8.2. If You initiate litigation by asserting a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You file such action is referred to as "Participant") alleging that:

(a) such Participant's Contributor Version directly or indirectly infringes any patent, then any and all rights granted by such Participant to You under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively, unless if within 60 days after receipt of notice You either: (i) agree in writing to pay Participant a mutually agreeable reasonable royalty for Your past and future use of Modifications made by such Participant, or (ii) withdraw Your litigation claim with respect to the Contributor Version against such Participant. If within 60 days of notice, a reasonable royalty and payment arrangement are not mutually agreed upon in writing by the parties or the litigation claim is not withdrawn, the rights granted by Participant to You under Sections 2.1 and/or 2.2 automatically terminate at the expiration of the 60 day notice period specified above.

(b) any software, hardware, or device, other than such Participant's Contributor Version, directly or indirectly infringes any patent, then any rights granted to You by such Participant under Sections 2.1(b) and 2.2(b) are revoked effective as of the date You first made, used, sold, distributed, or had made. Modifications made by that Participant.

8.3. If You assert a patent infringement claim against Participant alleging that such Participant's Contributor Version directly or indirectly infringes any patent where such claim is resolved (such as by license or settlement) prior to the initiation of patent infringement litigation, then the reasonable value of the licenses granted by such Participant under Sections 2.1 or 2.2 shall be taken into account in determining the amount or value of any payment or license.

8.4. In the event of termination under Sections 8.1 or 8.2 above, all end user license agreements (excluding distributors and resellers) which have been validly granted by You or any distributor hereunder prior to termination shall survive termination.

9. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED CODE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY'S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

10. U.S. GOVERNMENT END USERS.

The Covered Code is a "commercial item," as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of "commercial computer software" and "commercial computer software documentation," as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Code with only those rights set forth herein.

11. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by California law provisions (except to the extent applicable law, if any, provides otherwise), excluding its conflict-of-law provisions. With respect to disputes in which at least one party is a citizen of, or an entity chartered or registered to do business in the United States of America, any litigation relating to this License shall be subject to the jurisdiction of the Federal Courts of the Northern District of California, with venue lying in Santa Clara County, California, with the losing party responsible for costs, including without limitation, court costs and reasonable attorneys' fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed against the drafter shall not apply to this License.

12. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is responsible for claims and damages arising, directly or indirectly, out of its utilization of rights under this License and You agree to work with Initial Developer and Contributors to distribute such responsibility on an equitable basis. Nothing herein is intended or shall be deemed to constitute any admission of liability.

13. MULTIPLE-LICENSED CODE.

Initial Developer may designate portions of the Covered Code as "Multiple-Licensed". "Multiple-Licensed" means that the Initial Developer permits you to utilize portions of the Covered Code under Your choice of the NPL or the alternative licenses, if any, specified by the Initial Developer in the file described in Exhibit A.

EXHIBIT A -Mozilla Public License.

`` The contents of this file are subject to the Mozilla Public License Version 1.1 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at <http://www.mozilla.org/MPL/>

Software distributed under the License is distributed on an "AS IS" basis, WITHOUT WARRANTY OF ANY KIND, either express or implied. See the License for the specific language governing rights and limitations under the License.

The Original Code is _____.

The Initial Developer of the Original Code is _____.

Portions created by _____ are Copyright (C) _____
_____. All Rights Reserved.

Contributor(s): _____.

Alternatively, the contents of this file may be used under the terms of the _____ license (the "[_____] License"), in which case the provisions of [_____] License are applicable instead of those above. If you wish to allow use of your version of this file only under the terms of the [_____] License and not to allow others to use your version of this file under the MPL, indicate your decision by deleting the provisions above and replace them with the notice and other provisions required by the [_____] License. If you do not delete the provisions above, a recipient may use your version of this file under either the MPL or the [_____] License."

[NOTE: The text of this Exhibit A may differ slightly from the text of the notices in the Source Code files of the Original Code. You should use the text of this Exhibit A rather than the text found in the Original Code Source Code for Your Modifications.]

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.

59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

Third Party Notice Requirements

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

one line to give the library's name and an idea of what it does.

Copyright (C) year name of author

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public

License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library `Frob' (a library for tweaking knobs) written by James Random Hacker.

signature of Ty Coon, 1 April 1990

Ty Coon, President of Vice

That's all there is to it!
